

Additional Options Mobile Chicken Wagon

1. electric fencing unit and nets

Can be used for all types

The electric fencing unit is connected to solar panels, allowing the fencing nets to be powered all year round. The advantage of having electricity on the nets is that the chickens do not run under the fence net.

2. Feed hopper with hydraulic auger

There are two types of feed hoppers for filling the feed hopper. Both are equipped with a hydraulic feed auger. The feed chute at the rear of the Chickenwagon is at a height of 2.75 metres. To reach this height, a horizontal or vertical feed-through can be used.

vertical feed-through can be used. In this way, the feed bunker can be filled with a shovel as well as with a tractor.

3. Tools for behind the tractor

Tools for behind the tractor with three-point linkage. Retaining vertical hydraulic lifter and IBC barrel with 12-volt pump for filling the water supply. The great advantage of this implement is that the water and feed can be topped up at the same time. If a front loader is also available, the manure can also be taken along at the same time, so that transport to the Chickenwagon is necessary once a week for the weekly work.

4. Mushroom-shaped seat bars made of steel instead of wood

Suitable for all types

Mushroom-shaped perches made of steel have a longer lifespan and less contact surface, which means that red mites have a chance.

5. Railing and fence

Available for types 195/249/300/750

Railing at the stairs and fence inside before the first hole at the entrance.

6. Notification of malfunction

Can be used for all types

Screen with mobile phone modules in the control cabinet. This system ensures that an SMS is sent to the mobile phone in the event of a fault.

7. Levelling

Implementable on 195 / 249 / 300 and 750

That can be conveniently operated via the tractor's or Shaufel's hydraulics. To ensure that the Chickenwagon stands upright even on hilly terrain, it has four hydraulic support leg

8. Sunblind

Available on types 195/249/300

With this option, the chickens have extra shade and a better escape route. This sun cover can be folded against the chicken wagon when the wagon has to be moved across the road.

9. Fan with temperature sensor

Can be used for all types

The fan works with a temperature sensor and switches on or off automatically when the temperature is above or below the set temperature

10. Automatic feeding system

Executable on type 195 / 249 / 300 / 750

An automatic feeding system can be selected to replace the feed drums. This system feeds the chickens at least six times a day. The feeding times can be conveniently set on the computer. The main advantages of this automatic feeding system is the ease of use; the feed supply can be filled from the outside, the chickens have more distractions and the feed chain is eaten daily.

11. Dimmable lighting

Suitable for all types

The lamps in the upper room are dimmable and it is possible to simulate sunrise. Two additional lamps are then placed in the outlet area under the wagon.

12. Feeding rings

Applicable for all types with feed bins.

These feeding rings give the chickens an individual feeding place, which reduces the amount of spilt

feed.

13. Manure gate

Executable on type 100

With these versions, the slurry must be removed from under the grids every month. To do this, remove the perches from the grids and then lift up the grid floor. There is a slurry flap on the side so that the slurry can be easily pushed out from the inside via the slurry flap.

14. Touchpanel

Can be used for all types

This is a screen on which you can set and easily read everything.
